LABOR FORCE STATISTICS

Introduction

Volume Two of the Manpower Study of the Slave Lake Area contains an analysis of the data received from the questionnaire survey of a sample of the labor force in the study area. The specific methodology applied to derive these data is outlined in Volume One in the general section entitled "Methodology". The two volumes of the study are interdependent and should not be studied in isolation, one from the other.

Interpretation of Computer Analysis

The sets of tables which appear in the section entitled "Organization of Labor Force Statistics" organize the data received from the survey of the labor force in the study area. The following points should be noted in order to guarantee correct reading of the tables.

1) The data are organized into table sets. The pages are numbered first with table set number, and then with the page number of that set. For example, 1-1 indicates Table Set 1, page 1. 103-2 depicts Table Set 103, page 2.

2) Each table set is headed by the numbers of the variables compared. Such numbers correspond with a question number from the "Questionnaire Legend". For example, Table Set 1 is headed "Row variable: 1 with Column variable: 2". This indicates that question (1) from the questionnaire is being compared with question (2).

3) Each Table Set has four tables labelled as follows:

   frequency
   percentage by rows
   percentage by columns
   percentage by total

The frequency table indicates the actual number of respondents in each category. The total sample includes 471 respondents.

"Percentage by Rows" shows the frequency by percentage where 100% is the row total.

"Percentage by Columns" presents the frequency by percentage where 100% is the column total.

"Percentage by Total" indicates the frequency by percentage where 100% is the total sample.

4) In each table, row categories are numbered along the vertical axis and column categories along the horizontal. The "Questionnaire Legend" which follows will define the meaning of these numbered categories. For example, in Table Set 1, row variable 1 (that is, age) is compared with column variable 2 (that is, sex). Row categories (1-6) indicate age groups as outlined on the "Questionnaire Legend". Column categories (1-3) indicate sex groups as shown on the legend.
